

M. Ulinuha As Shiddiqy

Software Engineer — Backend, Full-Stack & Web3

Yogyakarta, Indonesia · +62 821-1539-4126 · m.ulinasidiki@gmail.com · jameshub.fun · github.com/Lin1er · linkedin.com/in/ulínuha

SUMMARY

Software engineer and Information Technology student at Universitas Gadjah Mada with 3+ years of hands-on experience shipping production systems: backend platforms serving 1,000+ users, AI-powered products, and multi-chain dApps across EVM, Solana, and Sui. Shipped 20+ projects — from national-scale competition platforms to live on-chain markets — with a track record of delivering end-to-end: smart contracts, event-driven indexers, scalable APIs, and polished frontends. Comfortable owning a product from architecture to deployment, and communicating it — including teaching smart-contract development in public workshops.

EXPERIENCE

Backend AI Engineering Intern — FlyRank AI

2026 – Present

- Selected for the Backend AI Engineering Cohort, building backend AI systems, APIs, and automation workflows.
- Developing real-world AI capstone projects focused on production-grade LLM integration.

Backend Engineer — UGM IT Event Platforms (Technocorner & FindIT)

2025 – 2026

- Built backend systems for two of UGM's flagship national technology competitions, together serving 1,000+ participants (technocorner.id, find-it.id).
- Designed APIs for registration, team management, submissions, and judging; optimized PostgreSQL queries to keep the platforms responsive during registration traffic spikes.

Stack: TypeScript, Node.js, Bun, Elysia.js, Express, PostgreSQL, JWT

Freelance Full-Stack Developer — Self-employed

2023 – Present

- Delivered client systems end-to-end: a boarding-school management platform supporting 200+ students (QR-based permissions, role-based access control, parent notifications) and a digital library platform with barcode borrowing and overdue notifications.
- Owned the full lifecycle — requirements, architecture, implementation, deployment, and maintenance.

Stack: Laravel, PHP, MySQL, Redis, Docker, React, Node.js, TailwindCSS

Workshop Instructor, Sui Move — Tech Community

2025

- Led a technical workshop on Sui Move smart-contract development: blockchain fundamentals, object-centric on-chain programming, and hands-on building on the Sui ecosystem.

SELECTED PROJECTS

RoastWager — Prediction & Opinion Market dApp (live: roast-wager.vercel.app)

- Built a full-stack prediction market on Monad end-to-end: smart-contract flows (create, vote, resolve, claim), an event-driven indexer with missed-block recovery, wallet integration, and optimistic UI for instant interactions.

Stack: Solidity, Foundry, Next.js, Hono, Supabase, wagmi, viem

Wall of 0gents — AI-Agent Financialization Platform (live on 0G Mainnet: wall-of-0gents.vercel.app)

- Engineered backend services and Solidity contracts for a platform where intelligent NFTs (ERC-7857) are fractionalized into ERC-20 shares and earn inference revenue — 99/99 contract test cases passing.

Stack: Solidity, Foundry, ERC-7857, x402, Node.js, TypeScript

Tredie — Trend-Driven Perpetual Markets on Solana (live: tredie.vercel.app)

- Built backend services for a protocol that auto-spawns markets from trending topics on X and Telegram: trend-polling pipelines, automated market creation, transaction builders, and webhook indexers decoding Anchor events.

Stack: Solana, Rust, Anchor, Node.js, Express, Privy, Helius

SuiStorage AI — Verifiable Marketplace for AI Training Data (live on Sui testnet)

- Built a marketplace where dataset quality is cryptographically attested inside a Nautilus TEE, access is enforced by Move contracts, and storage is decentralized on Walrus — working end-to-end purchase flow.

Stack: Sui, Move, Nautilus TEE, Walrus, Next.js, TypeScript

ClearContract — AI Legal-Tech Platform (live: clearcontract-safety.vercel.app)

- Built an LLM-powered contract analyzer that turns complex legal documents into plain-language insights: PDF parsing, bilingual support (EN/ID), and clause-level detection of hidden risks and red flags.

Stack: Next.js, TypeScript, Google Gemini API, PDF.js, TailwindCSS

GW Platform — Self-Hosted Google Workspace Management (in progress)

- Building an admin platform with TOTP MFA, JWT auth, role-based access control, audit logging, and a pluggable directory-engine abstraction over the Google Admin API; self-hosted with Docker Compose, Caddy, and automated backups.

Stack: FastAPI, Python, PostgreSQL, Next.js, Docker

EDUCATION

Universitas Gadjah Mada	2025 – Present	MAN Insan Cendekia East Lampung	2022 – 2025
B.Eng. in Information Technology — Yogyakarta, Indonesia		Selective national boarding school — Science major	

ACHIEVEMENTS & LEADERSHIP

- Silver Medal, NASFIA National Research Competition (2024) — IoT-based glucose-monitoring research: sensor pipelines integrated with machine-learning workflows on Raspberry Pi/ESP32.
- 2nd Place, Provincial Computer Science Competition (MIPA Expo, University of Lampung, 2023) — algorithms and computational problem-solving.
- 10+ hackathons & competitions — shipped working products at international Web3 hackathons including Sui Overflow, ETHGlobal, Colosseum, and the APAC Stellar Hackathon.
- Batch Leader (75+ students), MAN Insan Cendekia (2023–2025) — led a student cohort across academic and extracurricular programs; also served as Chairman of Commission A, student council.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, Go, Rust, PHP, Solidity, Move, SQL
Backend	Node.js, Bun, Express, Hono, Elysia.js, Laravel, FastAPI, REST APIs, JWT/Auth, PostgreSQL, MySQL, Redis, Supabase
Frontend	React, Next.js, TailwindCSS, Framer Motion, shadcn/ui
Web3	Solidity, Foundry, Anchor, Sui Move, wagmi, viem, smart-contract architecture, event indexing
AI	LLM integration (Gemini, OpenAI), prompt engineering, AI-agent workflows
Tools	Docker, Git/GitHub, Linux, Vercel, CI & testing (Vitest), IoT (ESP32/Arduino)
